Angular CLI

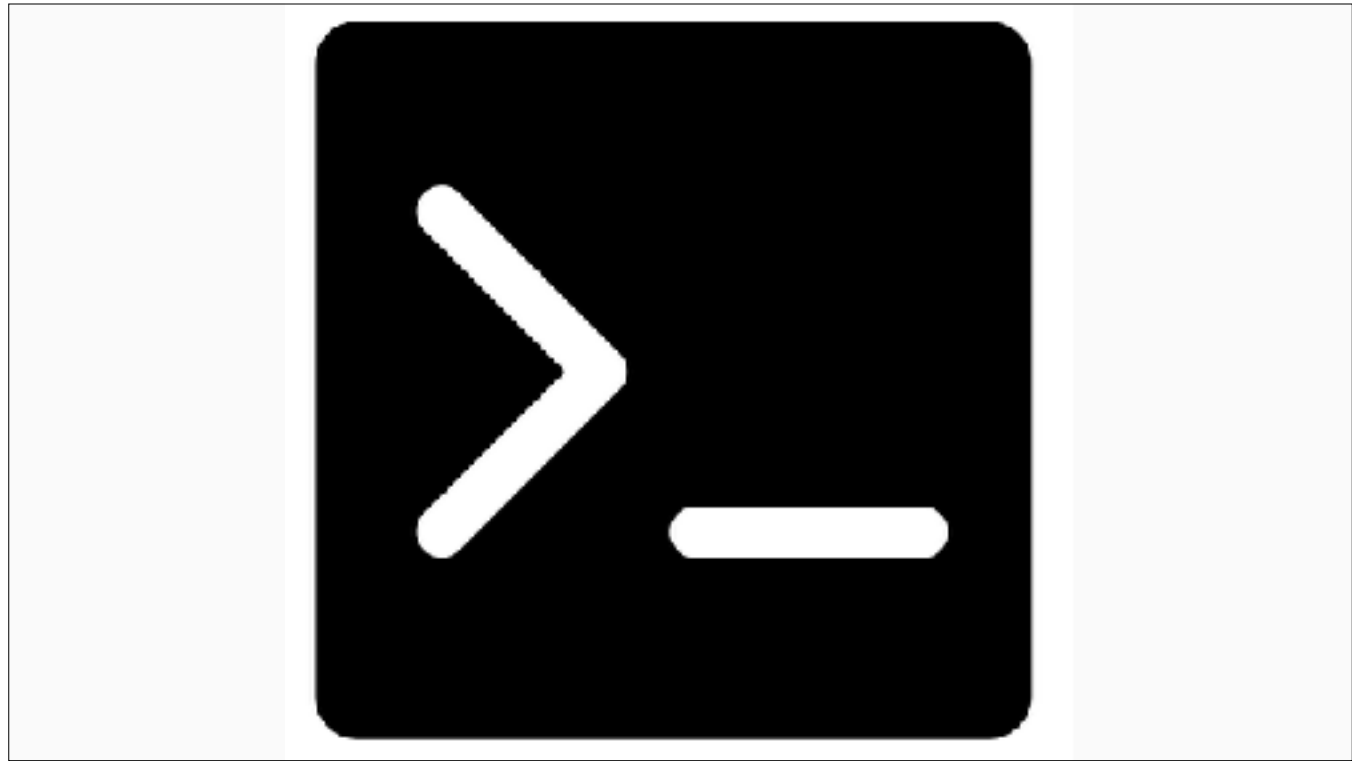

Mike Brocchi
@brocco
Technology Director

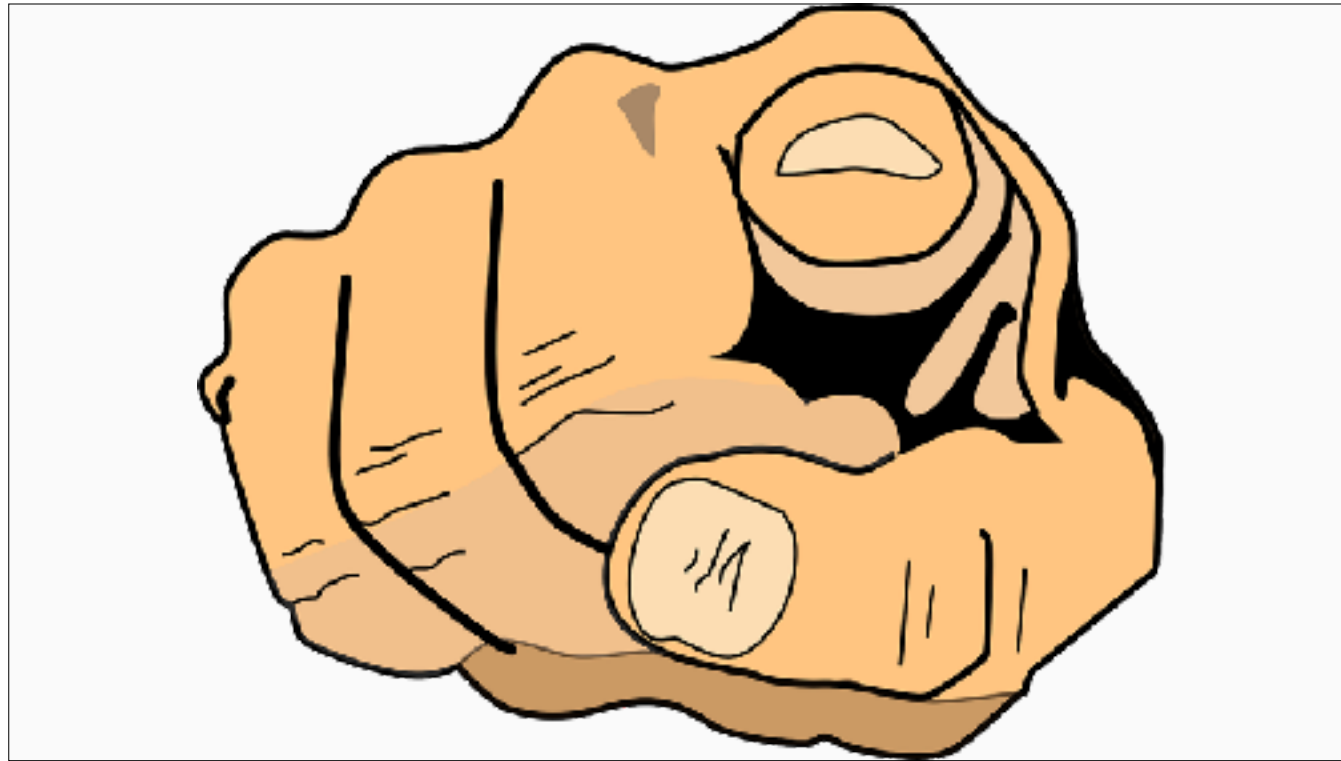

The Angular CLI

... is a command line...

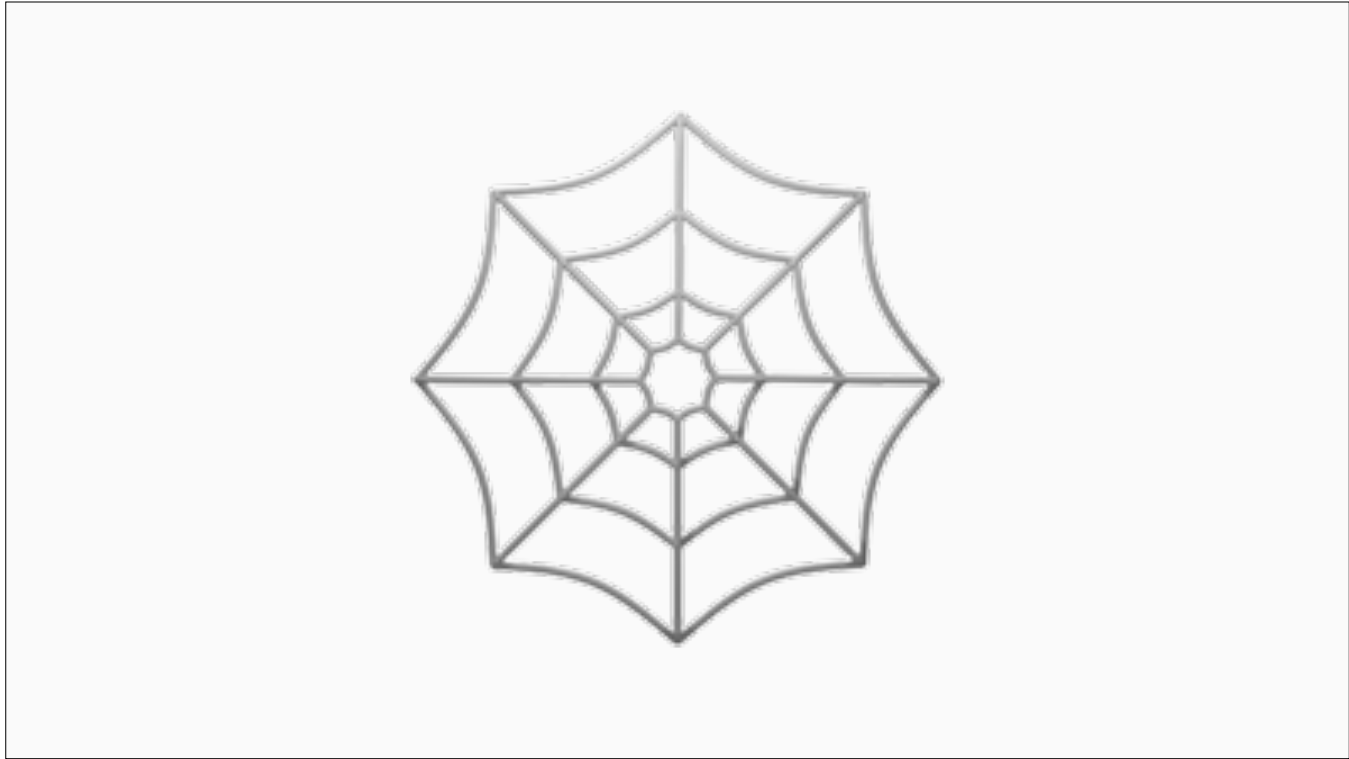

... tool ...

... that allows you ...

... to create Angular ...

... web applications ...

(yay)

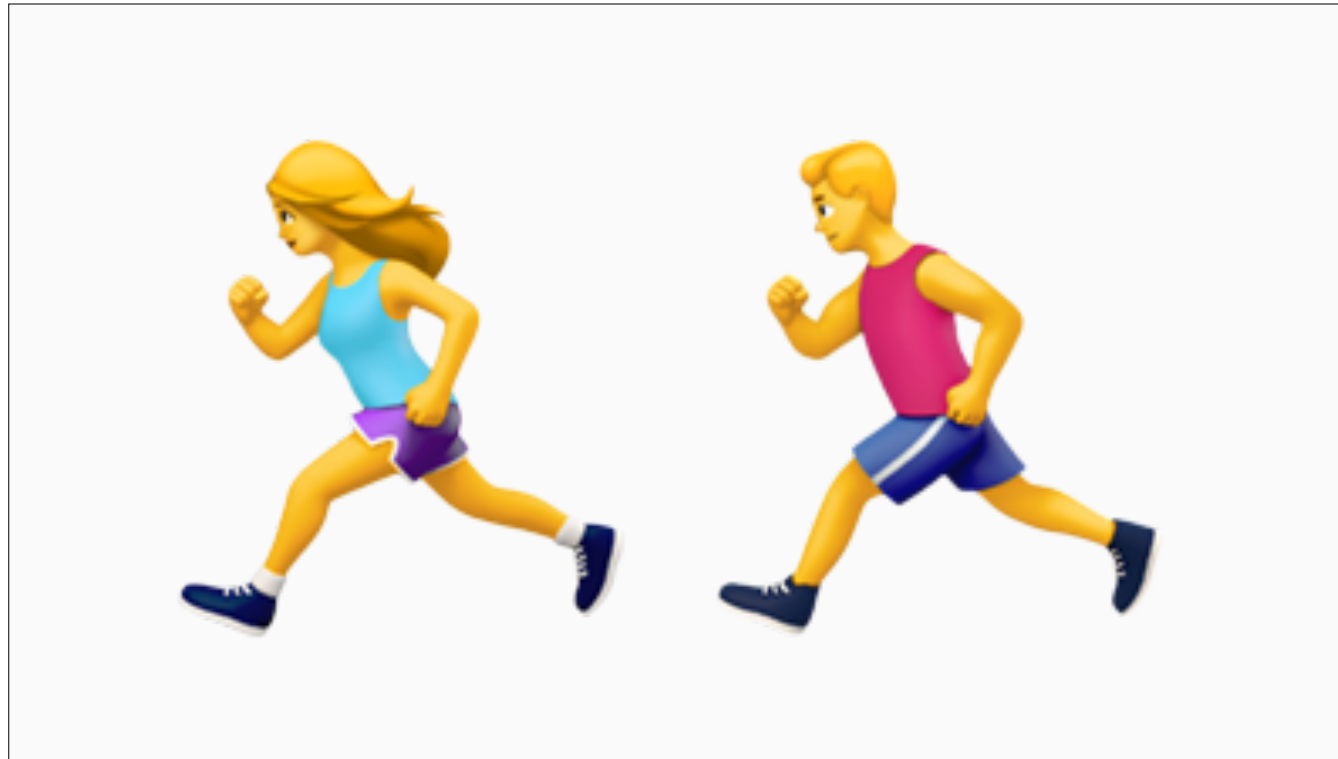

No matter you're experience... the CLI is for developers of ALL levels

(LOLZ)

Create - ng new

run - ng serve

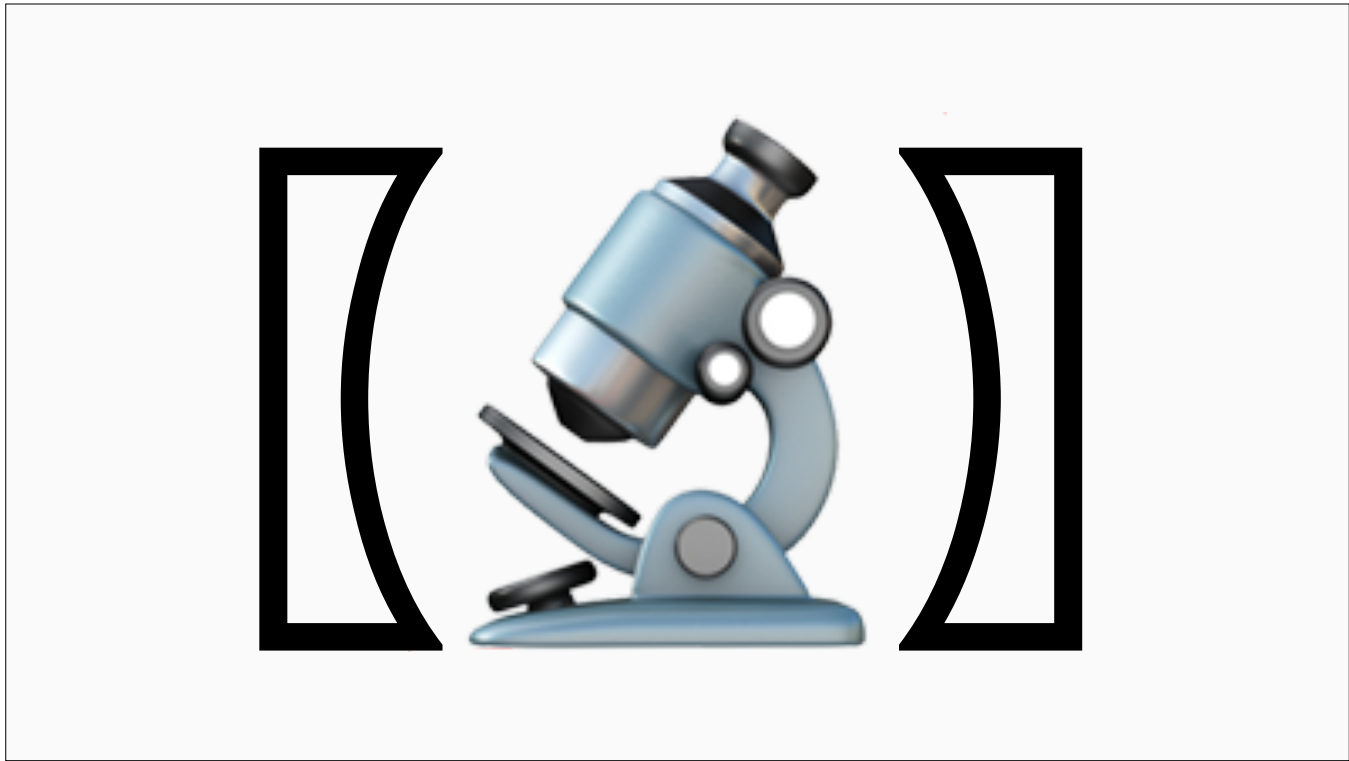

Build - ng build

test - ng test

no configuration, it just works

end 2 end test - ng e2e

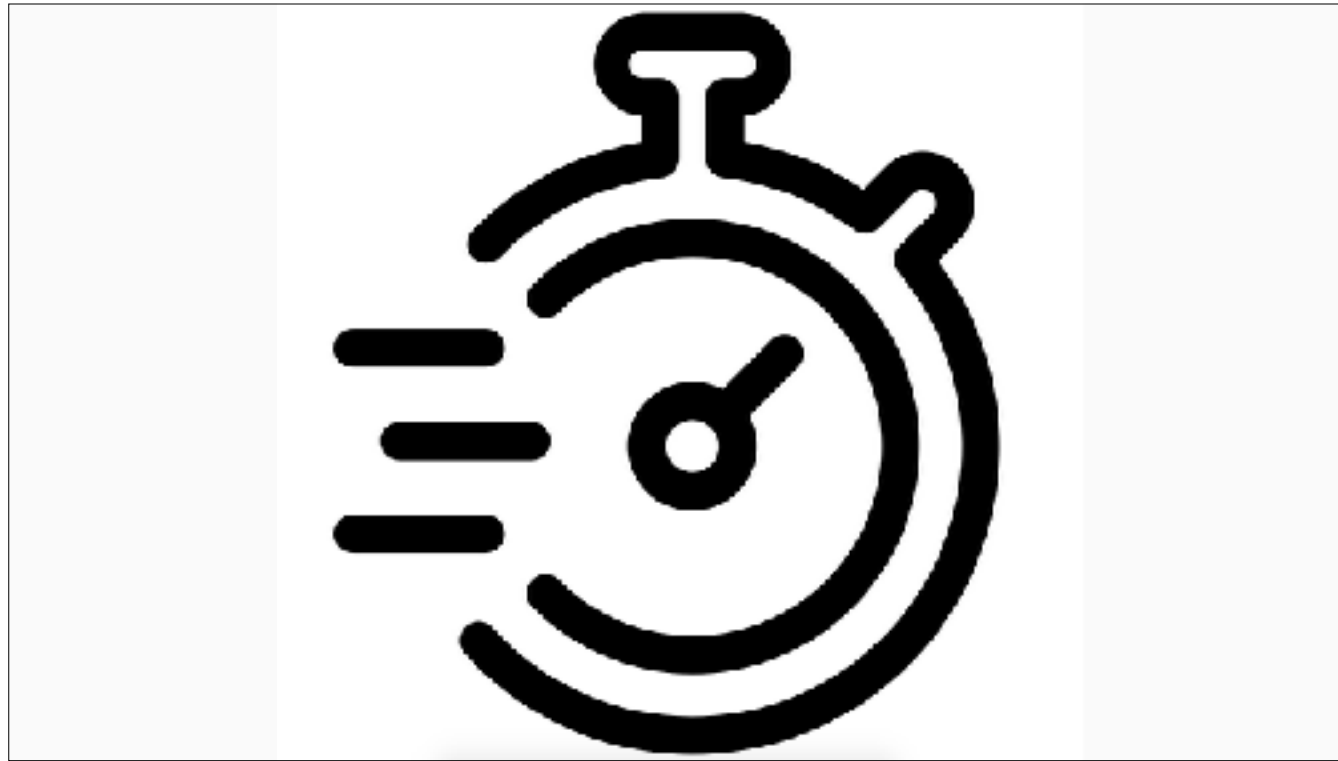

again no configuration, it just works

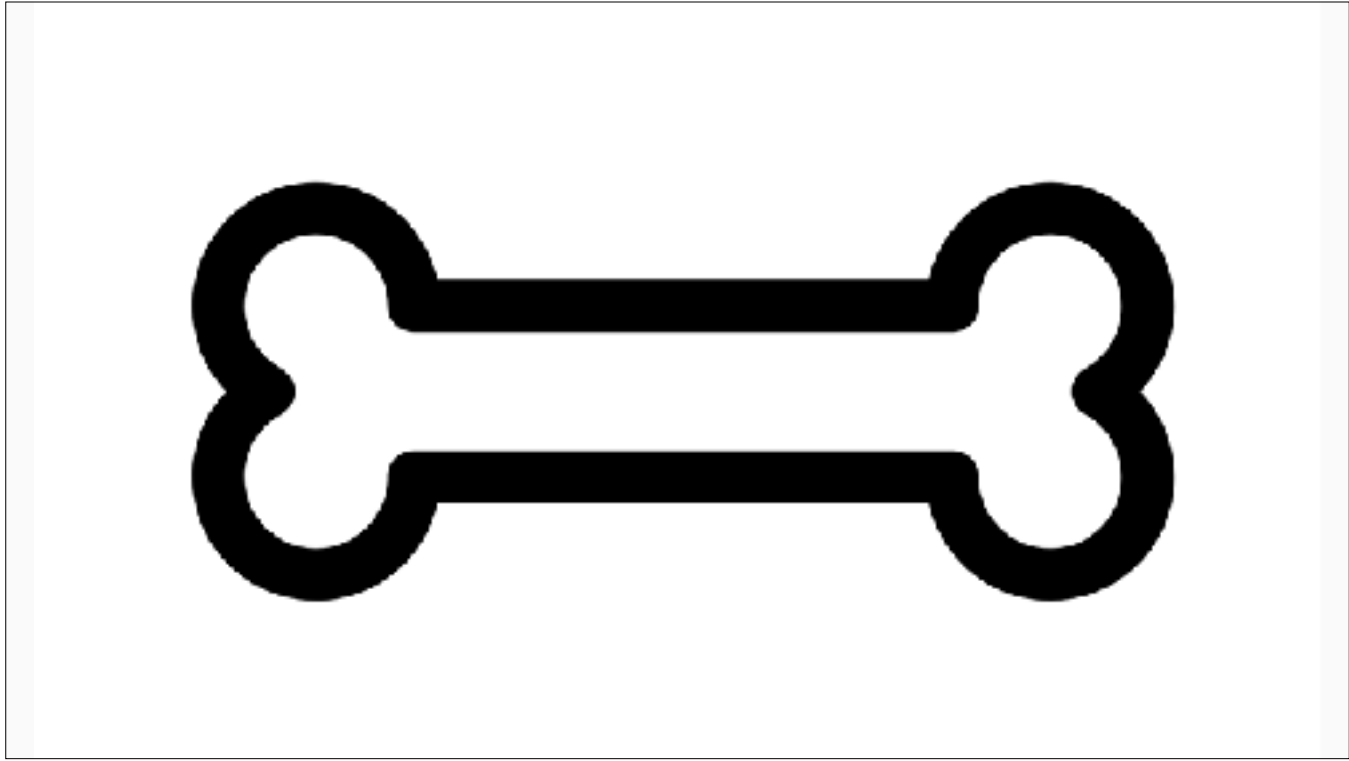

[check via ng lint...](#)

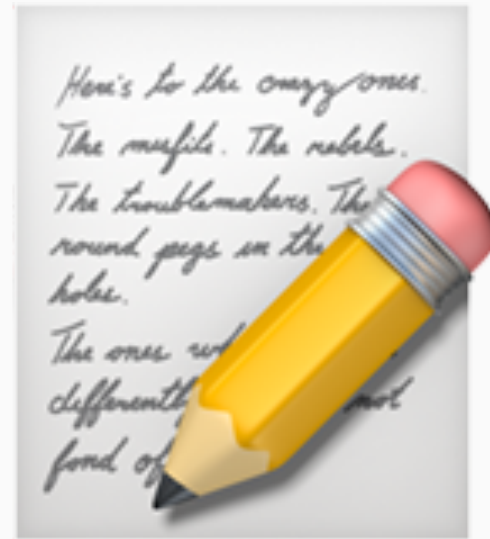

translate -xi18n

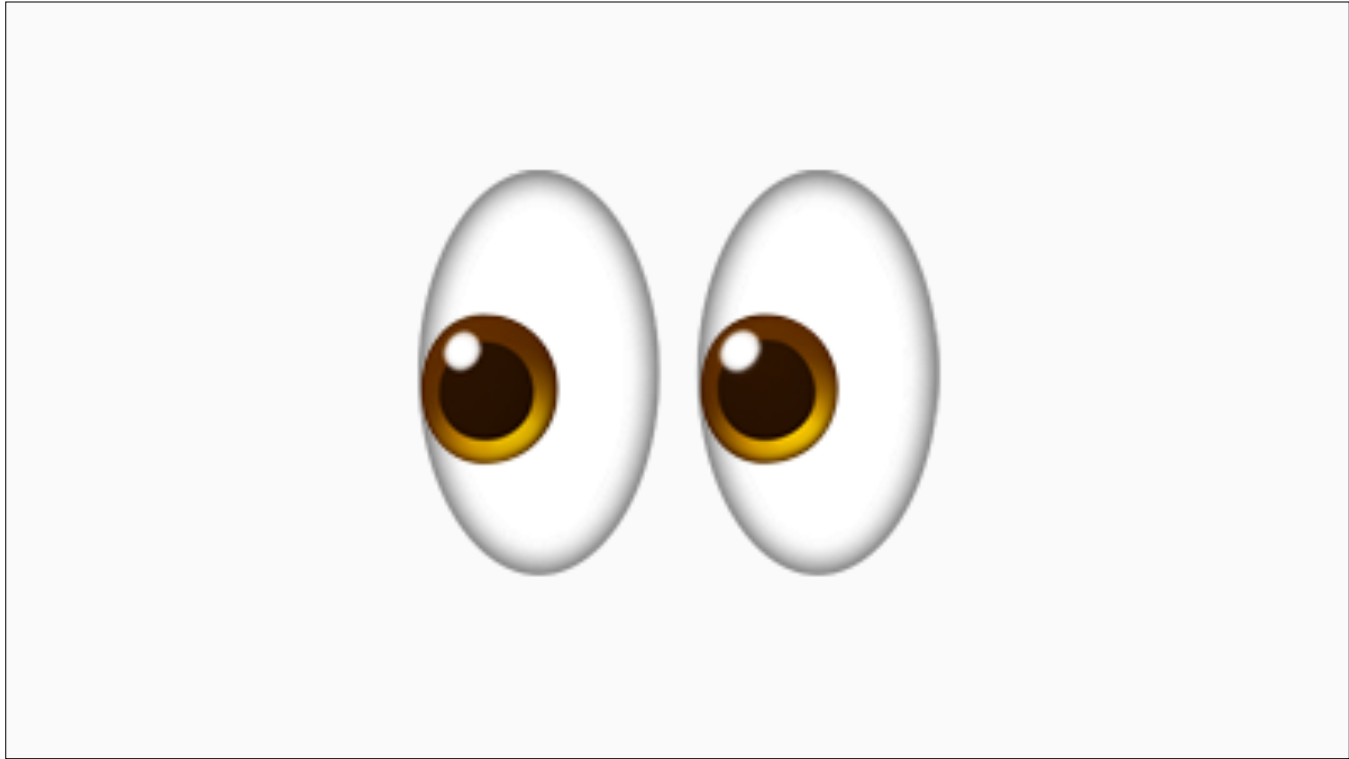

Plus we're making it faster with features like....

Barebones

Experimental

Let's take a look (demo)

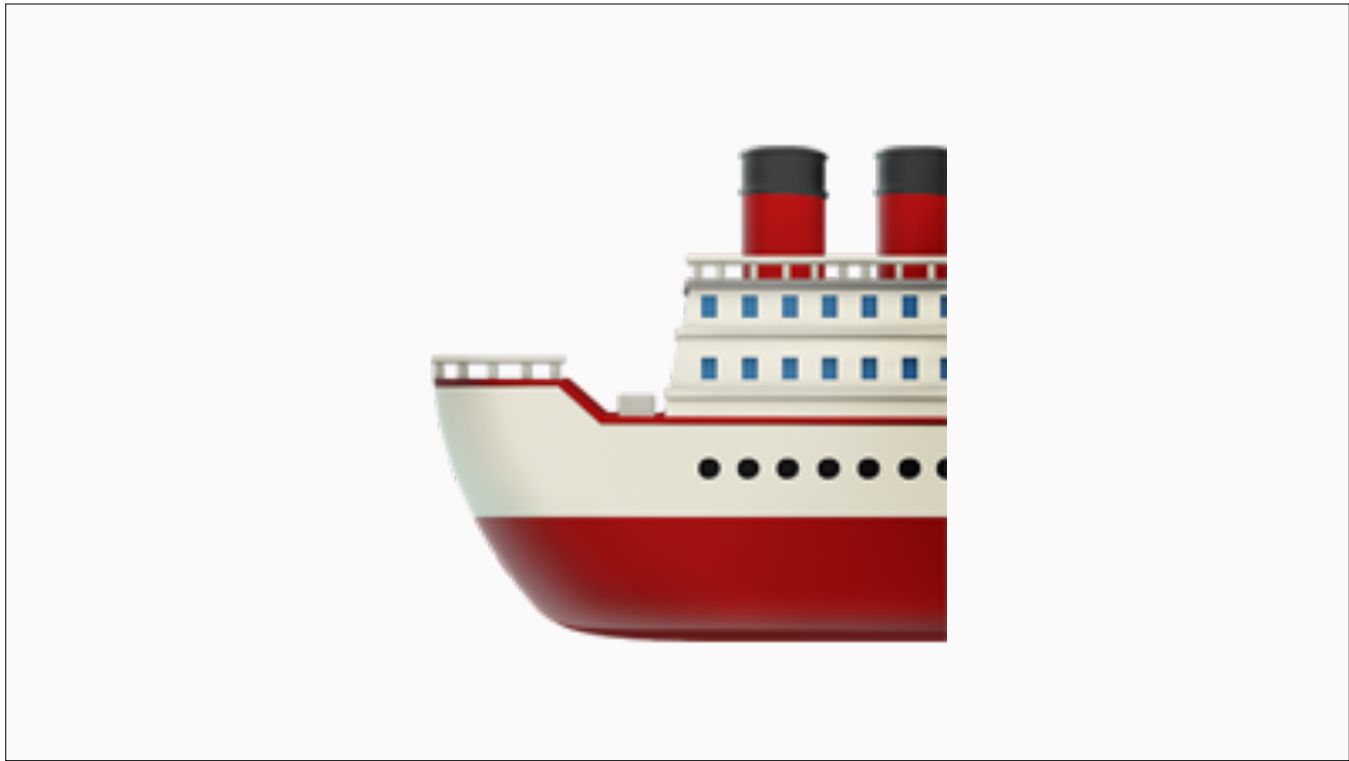

This is all great...

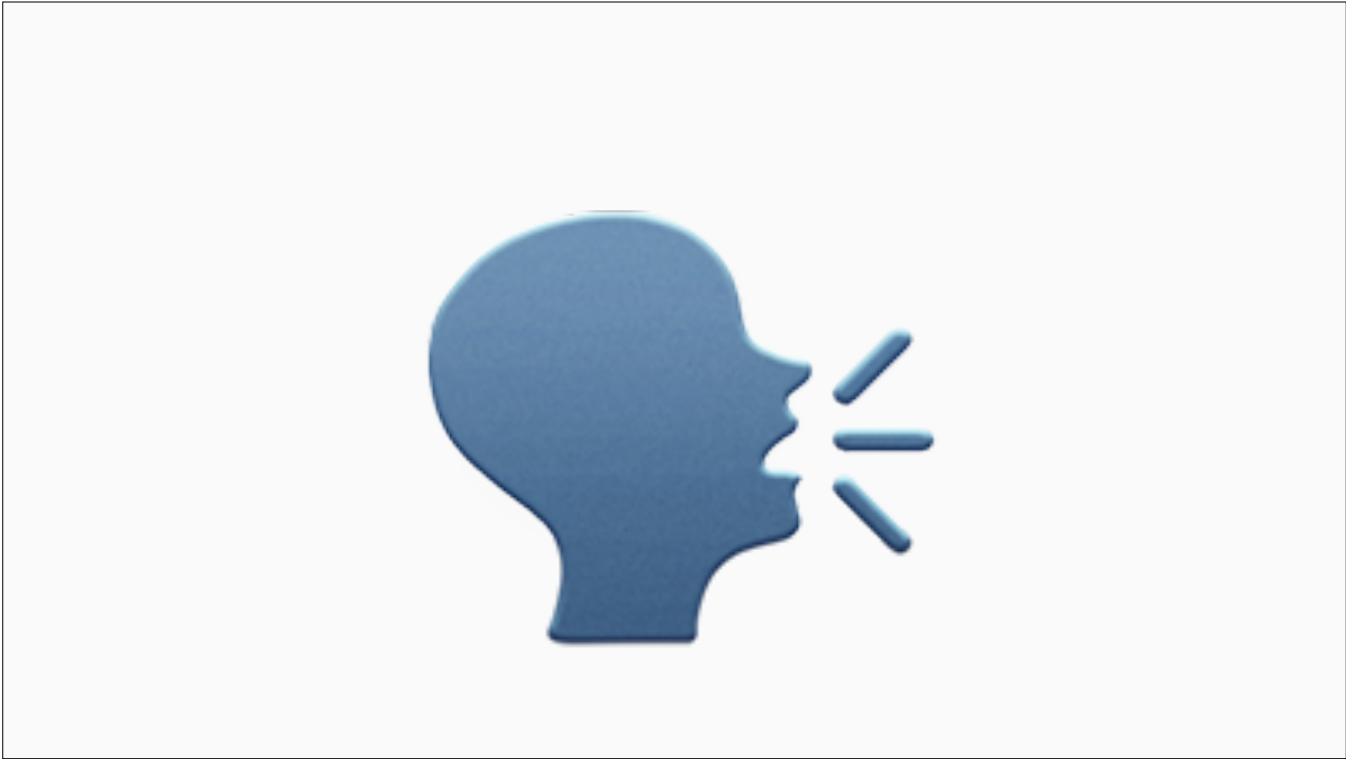

the team is not bored....

... and we're not stopping here

Since we're hear on this boat

let's talk and...

look to ... the future

Angular CLI

the CLI started small

The logo for Angular CLI, featuring a dark blue square with the text "Angular CLI" in white, centered within a larger light gray rectangle.

Angular CLI

and grew bigger

new build
serve
test e2e lint
doc set
get eject xi18n

with LOTS of commands

the nice cli package

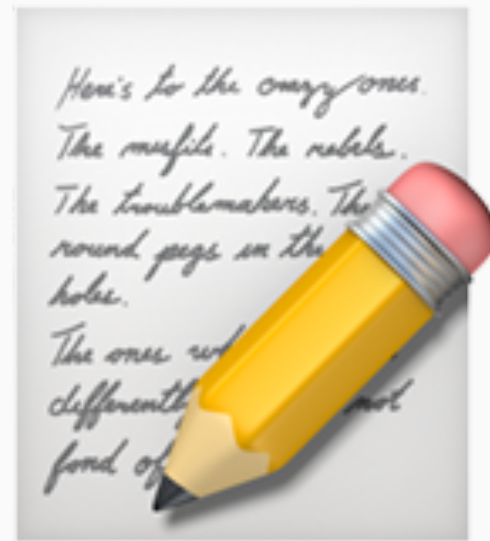

isn't so nice anymore

Requests for features

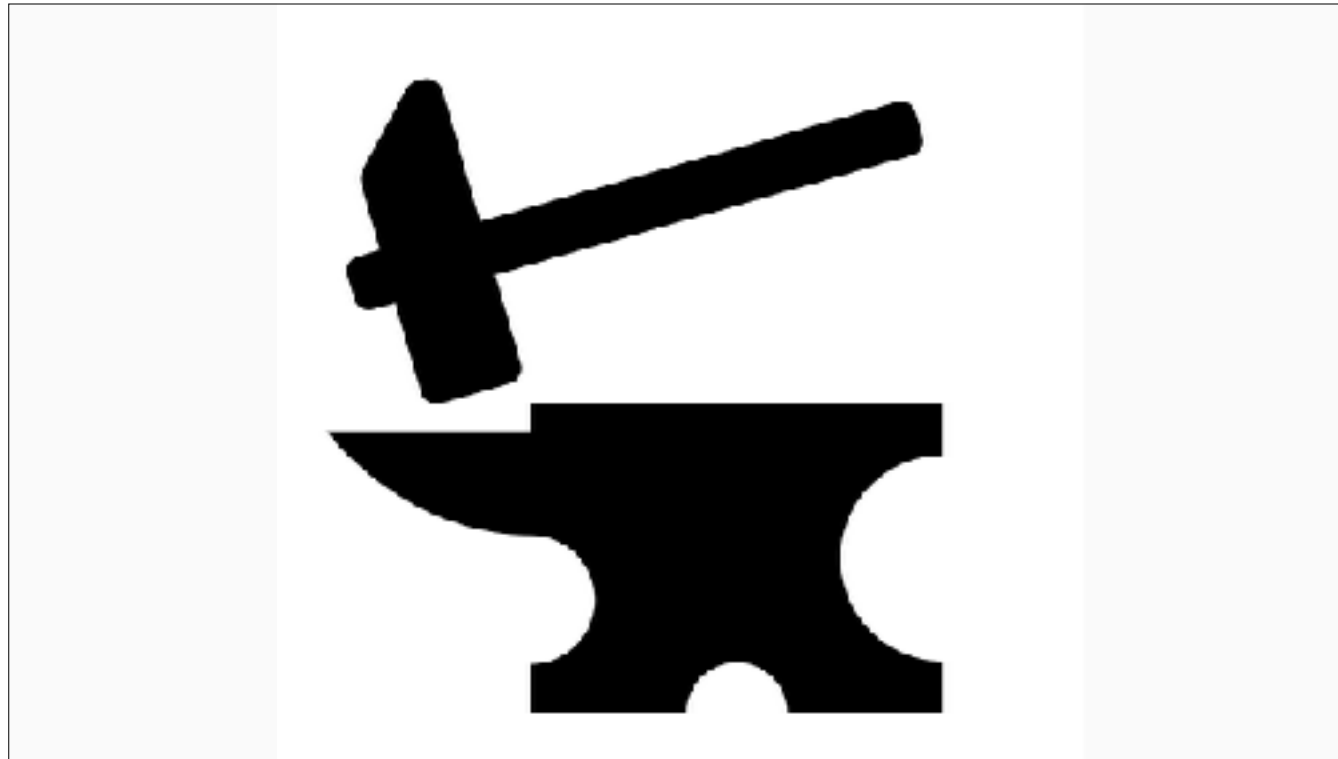

... have been delayed

DISCLAIMER...

not announcing anything official, just potential

because they were too heavy to implement

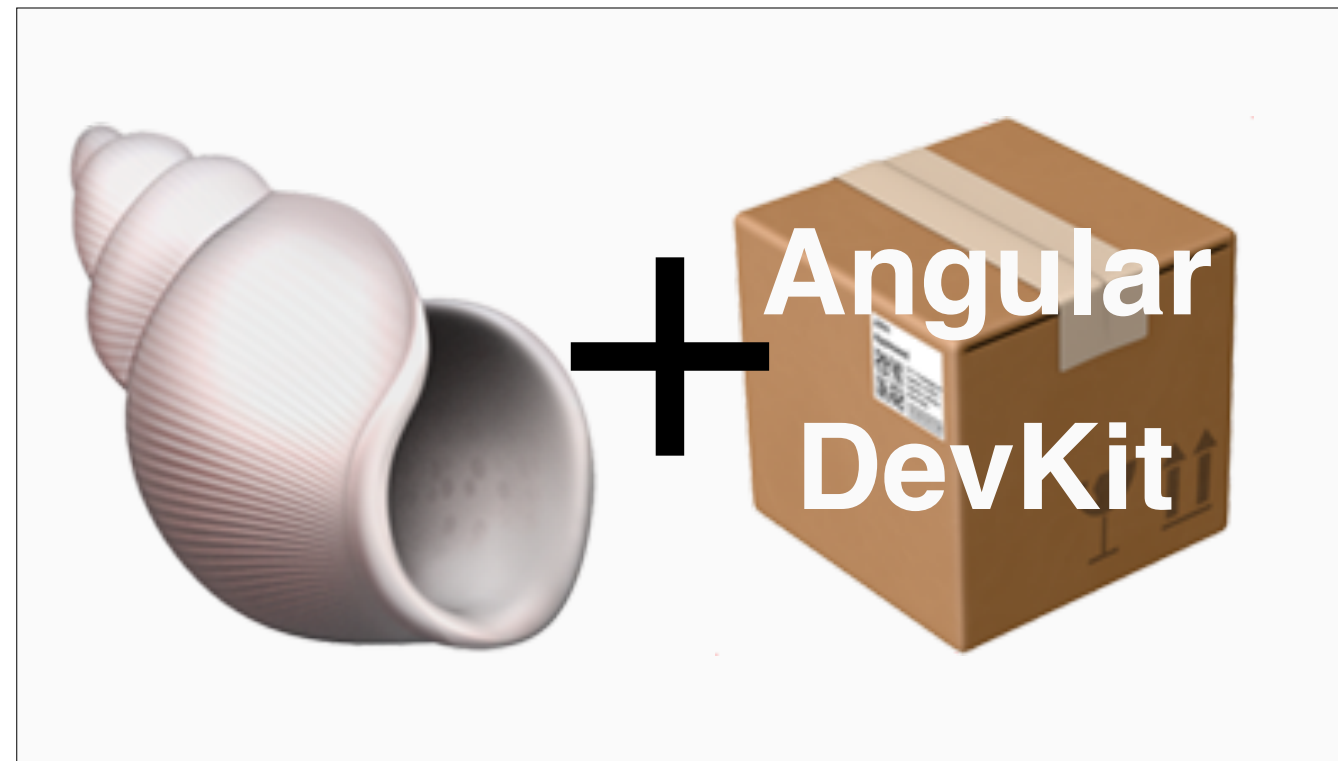

we know we needed something new

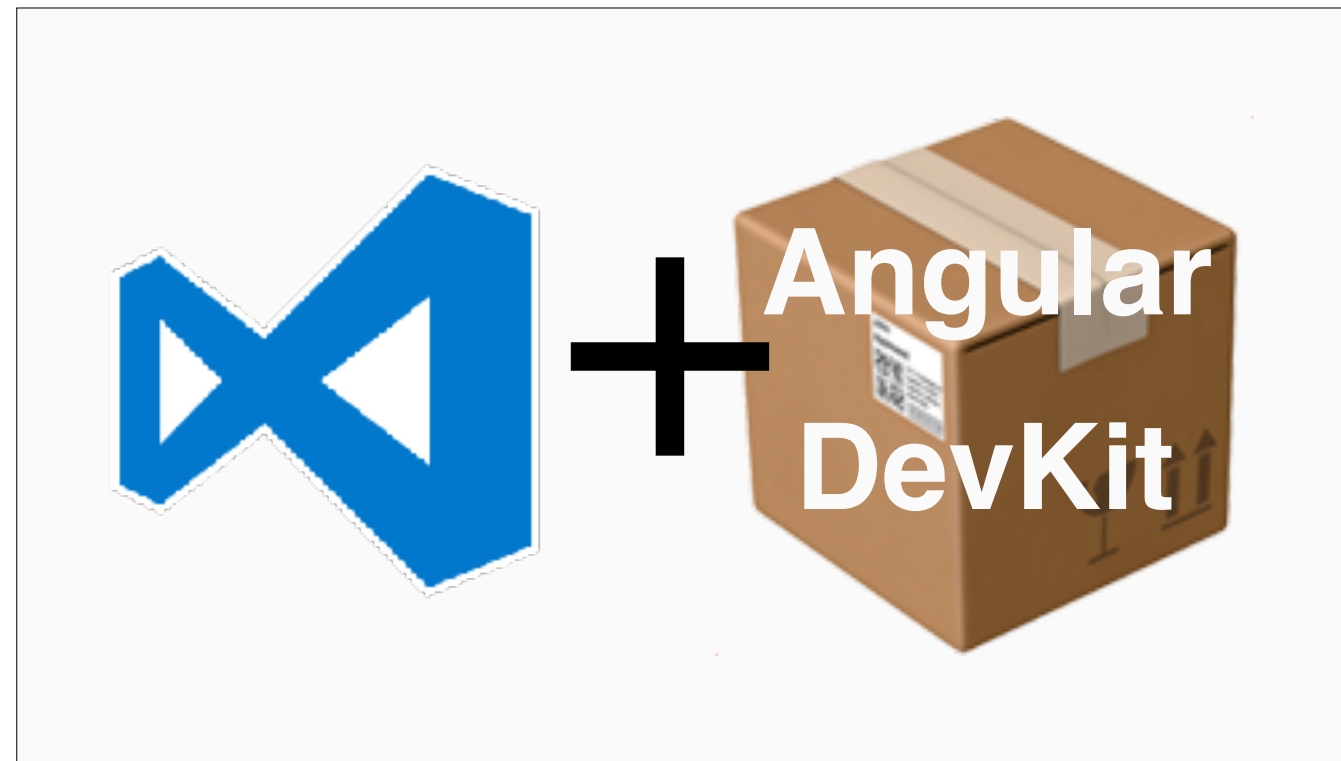

the cli will be a shell of itself

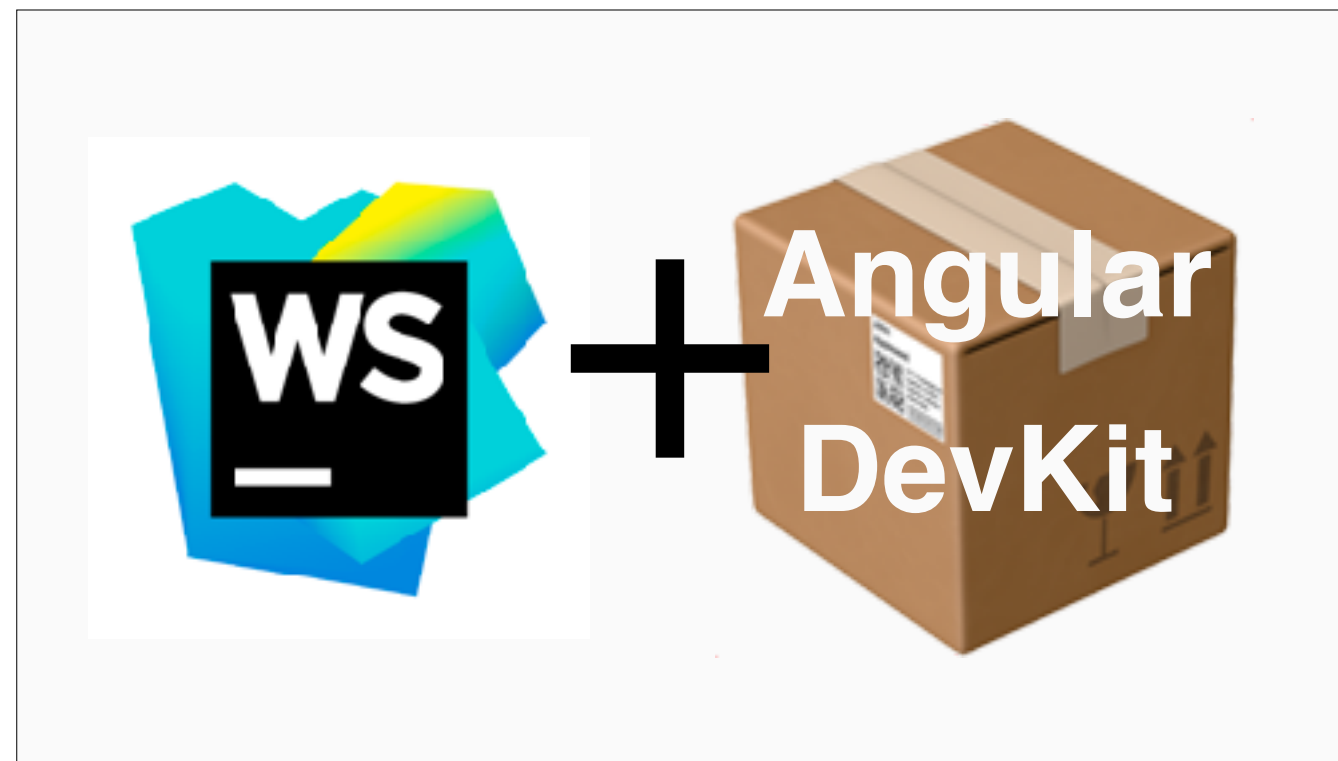

with the logic being moved to the Angular DevKit

IDE integrations are possible...

VS Code

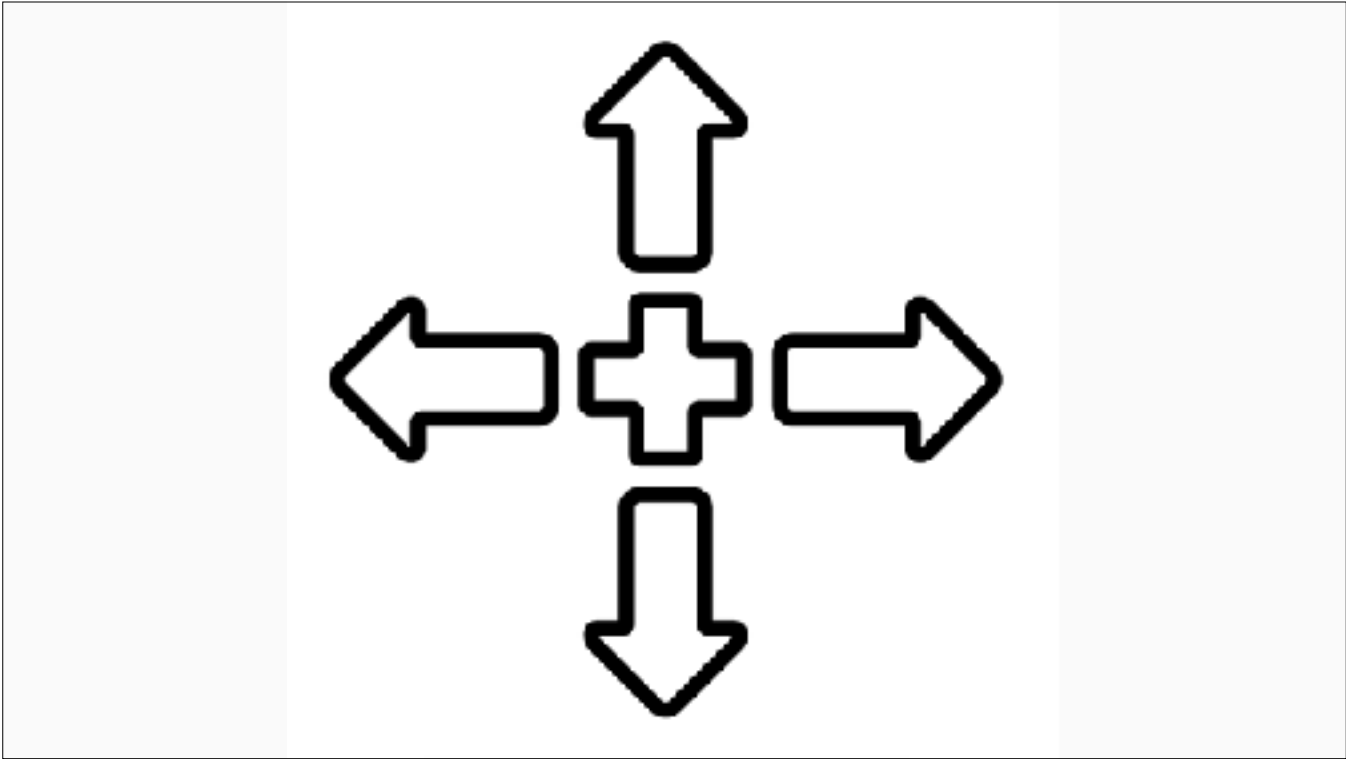

Webstorm

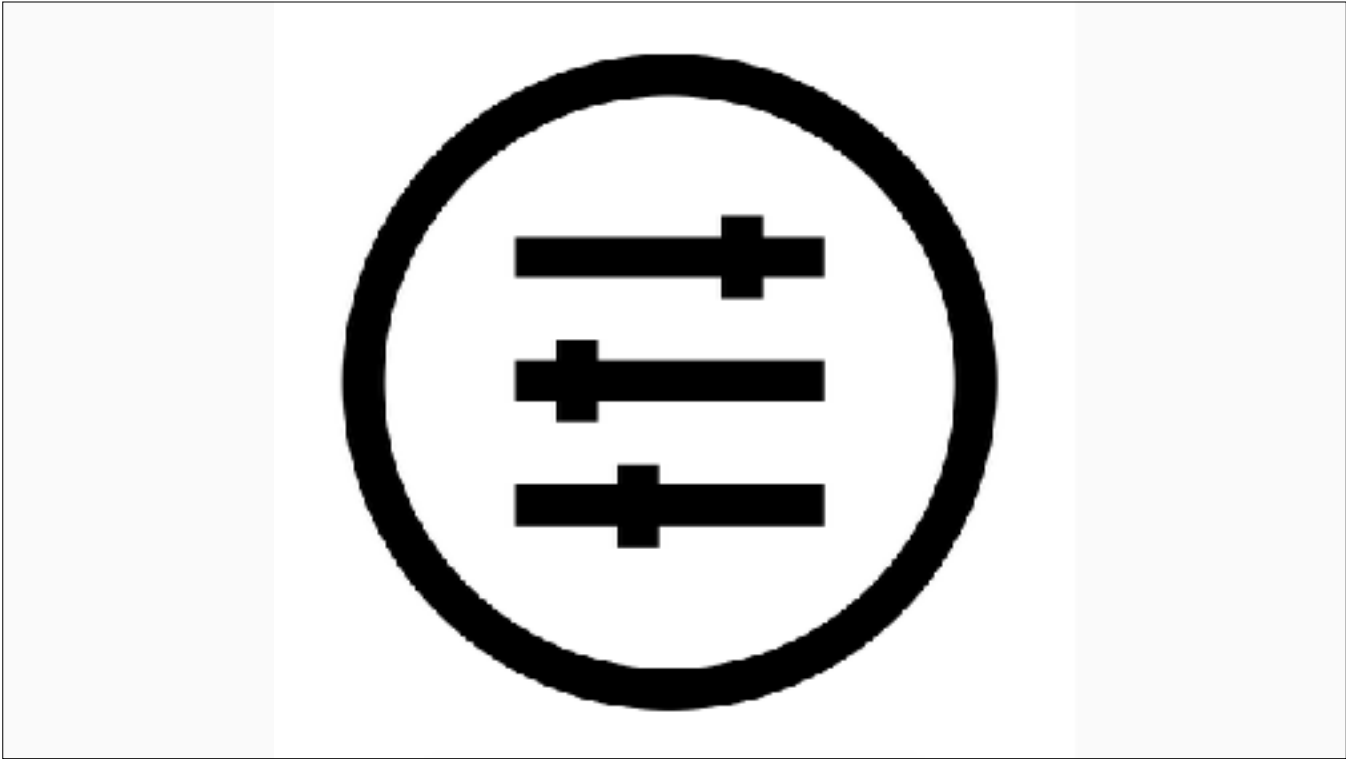

what else...

Unlocking access...

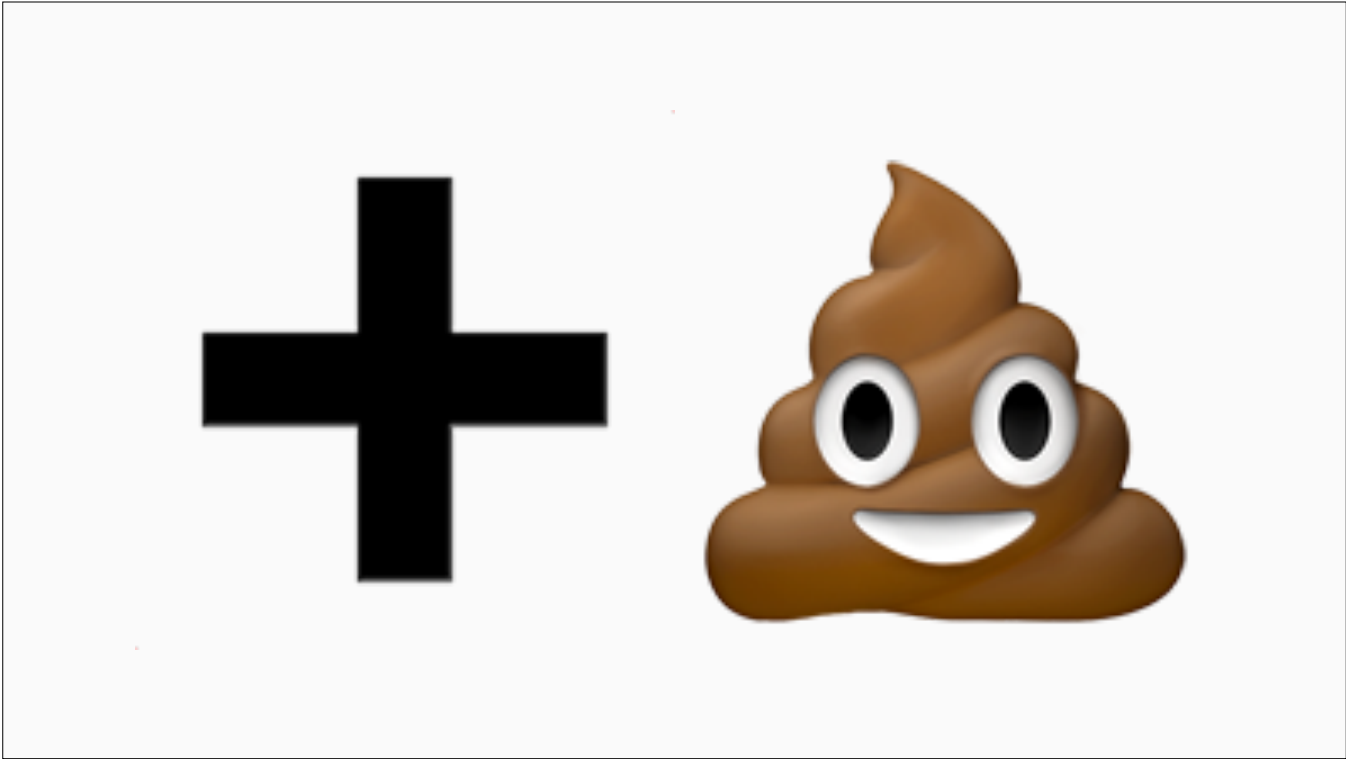

Extensible

Customizations

Plugins

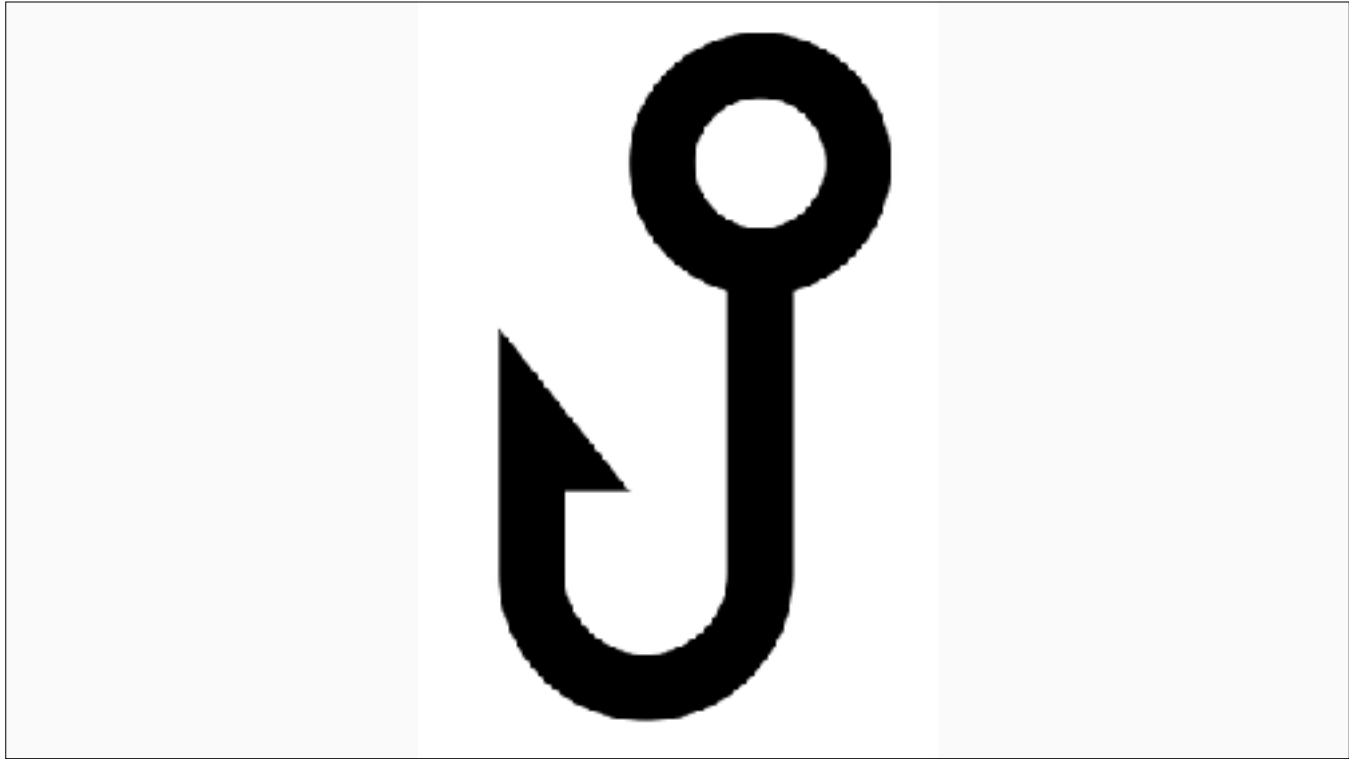

Add your own stuff

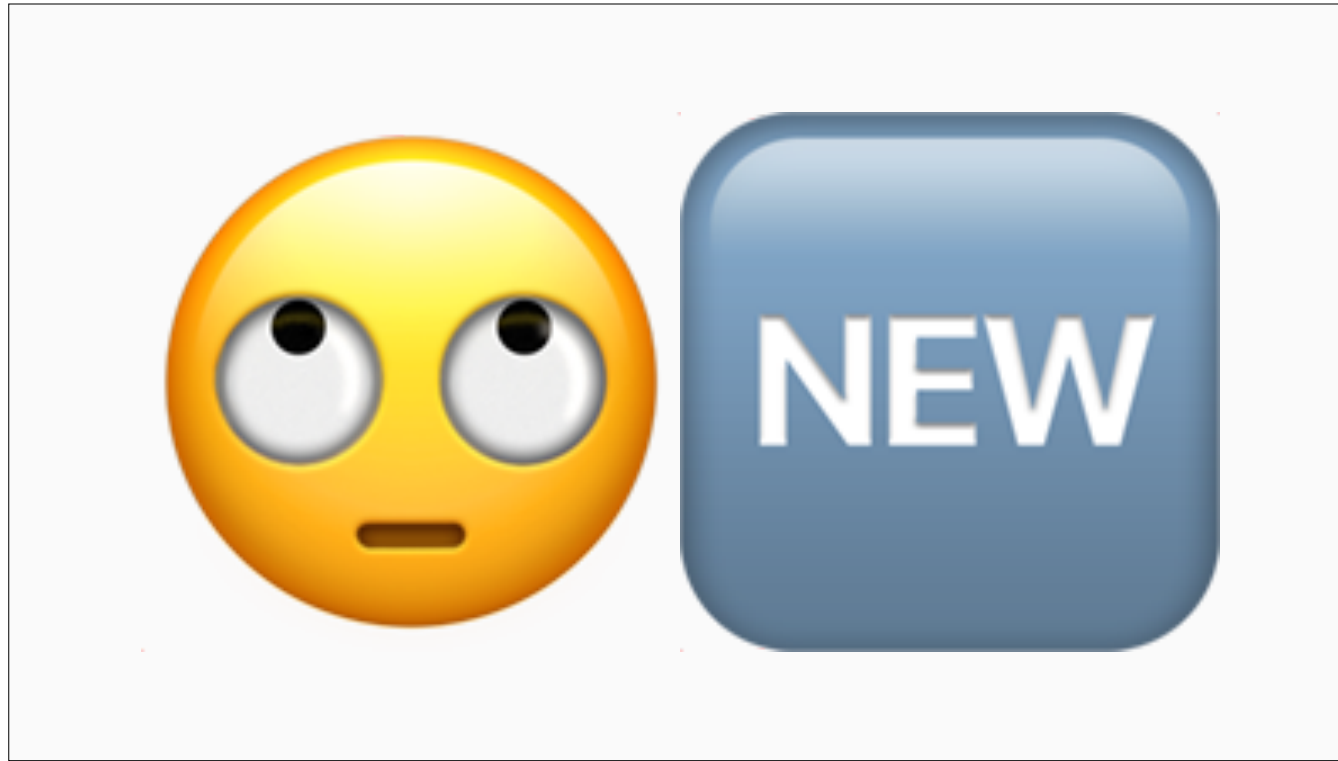

Custom blueprints

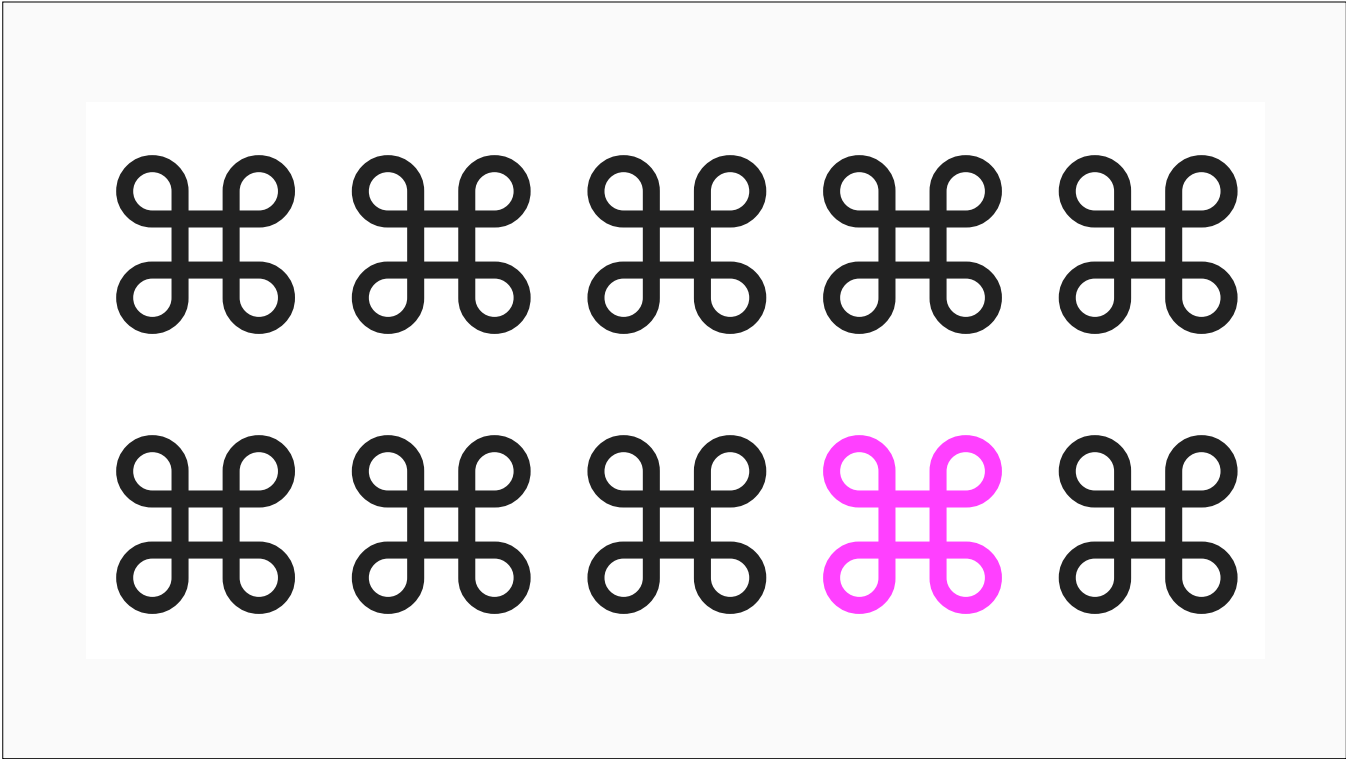

Build

Build hooks

Replace EVERYTHING

Custom commands

We think it will be As Shai would say....

the bees knees
